

AGREEMENT ABOVE ALL

The AO "Iskitimizvest" is the largest producer and supplier of lime in the Siberian and Far East regions of Russia and one of the leading suppliers of lime to Kazakhstan.
The plant produces up to 450 tons of high-quality quicklime and hydrated lime daily.

We guarantee our partners timely deliveries in the required volume.

August 21, 1947

The first explosion at the quarry and the launch of the "Iskitimizvest" plant were made

1960

Three crushing plants for the production of crushed stone were put into operation

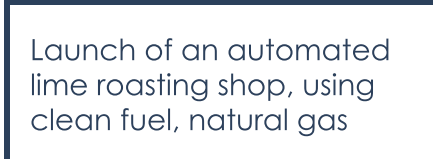

1984-1989

Construction of new mine bulk furnaces and electrified housing

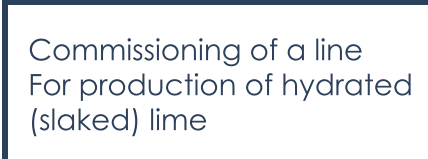

1996

Launch of an automated lime roasting shop, using clean fuel, natural gas

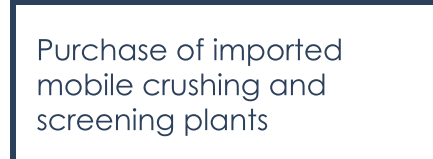

2006-2012

Commissioning of a line for production of hydrated (slaked) lime

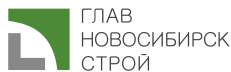

2017

Purchase of imported mobile crushing and screening plants

In 2003, the quarry «Iskitimlizvest» became a part of the largest construction holding of Siberia JSC «Glavnovosibirskstroy».

ГРУППА КОМПАНИЙ

In 1963 the GU on construction «Glavzapsibstroy» was formed. In 1970 it was transformed into «Glavnovosibirskstroy».

1963

**ЛЕВОБЕРЕЖНЫЙ
ПЕСЧАНЫЙ КАРЬЕР**

In 2002, a sand quarry was founded, a leader in the sand market in the Novosibirsk Region

2001

ЖБИ-5

One of the largest plants in the Novosibirsk region for the production of reinforced concrete products and concrete mortars

2011

ОБЛИЦОВОЧНЫЙ КИРПИЧ

Modern factory for the production of hyper pressed facing bricks and paving slabs

2015

1994

газобетон автоклавного твердения

The largest plant behind the Urals for the production of cellular autoclaved aerated concrete

2003

Slaked lime
grade 1

The products of the «Iskitimizvest» plant are distinguished by a balanced chemical composition, consistency of quality, high and stable content of active $\text{CaO} + \text{MgO}$, from 80%, minimum content of impurities (no more than 3%).

Shipping options:

Bulk; MKR; packing 3, 10, 25, 50 kg.

Delivery option:

Railway (wagons, gondola cars, containers), motor transport.

Indicators	Quicklime		Ground lime	Slaked lime
	II grade	III grade	II grade	I grade

Ferrous and non-ferrous metallurgy

Burnt and slaked (hydrate) lime «Iskitimizvest» is used in the production of ferrous and non-ferrous metals as a binder necessary for slag formation and removal of harmful impurities.

Benefits:

- balanced chemical composition with a minimum of impurities;
- stable and high activity of $\text{CaO}+\text{MgO}$:
80% for quicklime, 67% for hydrated lime;
- high quenching rate for effective binding and removal of S, P, As, Zn and Pb.

Precious metals

Burnt and slaked (hydrate) lime «Iskitimizvest» optimally meets the technical requirements of companies engaged in mining and processing of precious metal ores: gold, silver, platinum group ores.

Benefits:

- balanced chemical composition by the content of FeO and CaO;
- stable and high activity of CaO+MgO:
80% for quicklime, 67% for hydrated lime;
- lime roasting with natural gases: minimum CO₂ and ash residue content.

Light concrete, silicate brick

Quicklime «Iskitimizvest» provides high quality of various types of aerated concrete, foam concrete, cinder concrete and silicate bricks.

Benefits:

- natural calcium content 80%;
- stable activity of $\text{CaO}+\text{MgO}$ from 80%;
- high binding properties;
- safe and environmentally friendly raw materials.

Dry building mixes

Slaked (hydrated) lime «Iskitimizvest» gives dry building mixes plasticity, fluidity, increases strength.

Benefits:

- natural calcium content of 90%;
- Grade 1, CaO+MgO activity 67%;
- grain composition that meets the requirements;
- lime firing with natural gas: minimum content of CO₂ and ash residues;
- has a stable white color.

Agricultural industry

The «Iskitimizvest» products are widely used in various branches of agriculture: animal husbandry, crop production.

Benefits:

- animal feeding: elimination of calcium deficiency, proper formation of the skeleton;
- soil reclamation: enrichment, deoxidation, disinfection, saturation of Ca and Mg;
- disinfection of premises: disinfection, elimination of odors, waste disposal.

Other

In many industrial sectors, the «Iskitimizvest» products are widely used in production as a reagent or sorbent.

Benefits:

- in the chemical industry for the production of caustic soda, caustic soda, calcium hypochlorite;
- in the food industry for the purification of sugar beet juice from various impurities;
- in the leather industry for processing animal skin (saponification of fats);
- in the energy sector for wastewater treatment, neutralization of gas fumes;
- in the pulp and paper industry for the production of calcium hydroxide (bleaching, de-fibration of cellulose).
